EXECUTIVE SUMMARY

1.1 Introduction

The propose & Existing Farshi Pathar / Limestone Mine mineral project of 34.64 ha situated near Village- Barbaspur & Ghodhari , Tehsil- Mahasamund, District – Mahasamund, State- Chhattisgarh.

As all the applied mining leases of Barbaspur & Ghodari Farshipatthar / Limestone cluster having total area 34.64 hect (52 mines in Barbaspur & Ghodari – 31.23 hect + 5 mines in Ghodari - 3.41) area and cluster area including these applied mines is 58.43 hect, therefore the project is categorized as “B1”, and thus requiring prior environmental clearance from the State Environmental Impact Assessment Authority (SEIAA) / State Expert Appraisal Committee (SEAC) Chhattisgarh. TOR issued in favour of project proponent whose details as follow:

SN	Name of the Applicant	TOR Number & Date
1	Archana Chandrakar	1026/ S.E.A.C.,C.G./Mine/1981 Nawa Raipur Atal Nagar, Dated 27/09/2022
2	Jhhalaram Chandrakar	22/ S.E.A.C.,C.G./Mine/2197 Nawa Raipur Atal Nagar, Dated 03/04/2023
3	Kesar Ganga Stone Industries (Prop. - Dilip Talreja)	2726/ S.E.A.C.,C.G./Mine/1956 Nawa Raipur Atal Nagar, Dated 23/03/2023
4	Anupama Ratre	1230/ S.E.A.C.,C.G./Mine/2002 Nawa Raipur Atal Nagar, Dated 31/10/2022

Draft EIA Report for Barbaspur&Ghodhari Farshi Pathar Mine at Village-Barbaspur&Ghodhari Tehsil-Mahasamund, District –Mahasamund, State- Chattishgarh .

This mining project comes under Category 'B1' (Cluster situation) Project or activity 1(a) as per EIA Notifications 2006, and its subsequent amendments and will be appraised at SEAC, Chattisgarh. The lease is falling in the cluster as per 15th January 2016 EIA Notification of MoEF&CC and NGT order dated 13th September 2018.

A total of 95 Farshi Patthar stone quarries are located in village Barbaspur, Ghodari and Mudhena tehsils and district Mahasamund cluster area, whose total area is 58.43 hectares.

The National Highway and Railway line passes through the middle of village Ghodari. Thus, 70 mines (total area 40.60 hectare) are located in village Barbaspur and village Ghodari area, north of the National Highway, and 25 mines (total area 17.83 hectare) are located in village Ghodari and Mudhena area, south of the highway. The distance between the two areas is only 660 meters.

During the E.I.A study, the buffer zone of both the areas is overlapping with each other, and the mines of village Ghodari are located on both sides of the road.

Therefore, all the PP's were requested that before SEAC to give permission to joint study and to prepare combined EIA report and conduct the public hearing on the basis of joint EIA, keeping all the 95 mines (total area 58.43 hectare) in a cluster located in villages Barbaspur, Ghodari and Mudhena. Honourable S.E.A.C. accepted the request and issued TOR for joint EIA Study.

Therefore, for 52 mines coming in village Barbaspur and Ghodari and 5 mines coming in village Ghodari jointly E.I.A. study is conducted and joint EIA report has been prepared while studying. And for this, taking up to 10 km from the end of the last mine in all four directions in the cluster, the study area/buffer zone for E.I.A. Study has taken.

The graphical representation of 95 mines falling in the cluster area is as follows -

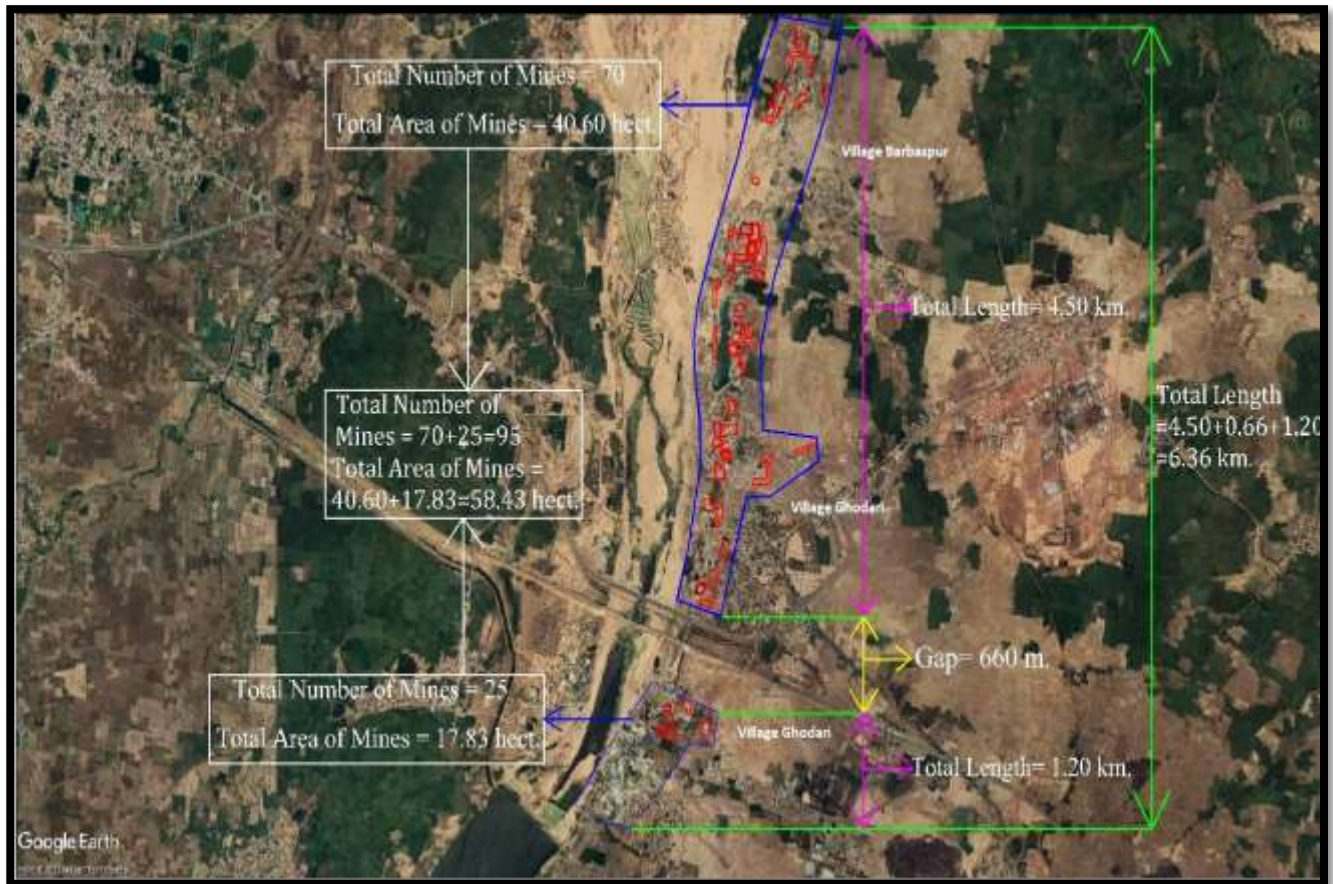

Figure 1.1: Cluster map on google image of Barbaspur & Ghodari Cluster Area

Summary			
SN	Particulars of Mines		Area in Hect.
1	Cluster Area of Village Barbaspur & Ghodari which includes 70 mines situated at Northern region from National Highway	=	40.60 hect
2	Cluster Area of Village Ghodari & Barbaspur which includes 25 mines situated at Southern region from National Highway	=	17.83 hect
Total Area of all Mines of Flagstone (1+2) (Total 95 Mines)		=	58.43 hect

Draft EIA Report for Barbaspur&Ghodhari Farshi Pathar Mine at Village-Barbaspur&Ghodhari Tehsil- Mahasamund, District –Mahasamund, State- Chattishgarh .

57	Lalit Kumar Chandrakar	S/o. Shri Johan Lal Chandrakar, Village -Barbaspur, Tehsil & District - Mahasamund, (C.G)	Barbaspur	358 (part)	64 K/4, 64G /16	Government

Note :-

1. Out of the above 57 mines 4 lease of serial no. 1-Archana Chandrakar, 16 – Omprakash Chandrakar, 26 – Akhilesh Chandrakar and 33 – Rajendra Chandrakar are fresh new leases where application for environment clearance is being submitted for the first time. Rest 53 mines are already existing mines where environment clearance was granted them by DEIAA Mahasamund for 5 years, now these mines are suppose to apply for re-appraisal of their cases before SEIAA due to order of NGT dated 07.07.2022 and MOEF OM dated 28.04.2023.
2. Out of the above 57 mine lease, following leases are being transferred to other applicant therefore application for TOR and Environment Clearance is being filed in the name of transferee. The details of transferer and transferee are given below –

S.N O	PROJECT NAME	TRANSFERER (PREVIOUS MINE LEASE HOLDER)	TRANSFEEE (EXISTING/PROPOSED LEASE HOLDER)	LEASE TRANSFERRED WITH EFFECT FROM
1	Keshar Ganga Stone	Anand Stone Pro.Sapna Singhaniya	Keshar Ganga Stone Pro. Dilip Talreja	01.02.2019
2	Jagdish Stone Industries	Brijesh Chandrakar	Jagdish Stone Industries Pro. Chanda Tawri	19.12.2018
3	Ajay Farshi Udyog	Amar Singh Thakur	Ajay Farshi Udyog Pro. – Kunwar Ajay Sahu	01.03.2019
4	Arihant Tiles	Tejendra Sharma	Arihant Tiles Pro. – Manish Kothari	21.09.2020
5	Ashok Sahu	Firtu Ram Sahu	Ashok Sahu	28.07.2018
6	Somesh Parmar	Smt. Jaishree Parmar	Somesh Parmar	18.03.2021

3. Lease holder Serial no. 57 – Lalit Kumar Chandrakar was expired. This fact was produced before Hon'ble SEAC at the time of presentation for TOR. This fact was noted by the committee and allowed to proceed further through his brother Shri Nemichand Chandrakar. Therefore signature of Shri Nemichand Chandrakar has been taken for undertaking for submission of EIA.

Similarly in case of applicant Serial no. 56 - Khadan Kamgaar Samiti its President - Nathuram Banjare has also been expired and therefore Khadan Kamgaar Samiti has elected Shri Chhotku Ogare as President of the Samiti to proceed further, therefore signature of Shri Chhotku Ogare has been taken for undertaking for submission of EIA.

Table 1.1D: Details of Distance of Sensitive Structure from Project location

Particulars	Descriptions
Seismicity	Since project site comes under Seismic zone II, which is least active zone for earthquakes as per IS: 1893 (Part 1: 2002).
Reserved / Protected Forests	Tumgaon RF, 9.8 km in E Boriyajhar PF, 9.7 km in SE
Wildlife Sanctuary	None within 10 km radius from all of the applied mines
National Park	None within 10 km radius from all of the applied mines
Protected areas as per Wildlife Protection Act (Tiger reserve, Elephant reserve, Biospheres, National parks, Wildlife sanctuaries, community reserves and conservation reserves)	None within 10 km radius from all of the applied mines
Archaeologically important places	None within 10 km radius from all of the applied mines
Defense Installations	None within 10 km radius from all of the applied mines
Biosphere reserves	None within 10 km radius from all of the applied mines
Important migration routes of birds	None within 10 km radius from all of the applied mines
Ramsar sites (Wetlands of International Importance)	None within 10 km radius from all of the applied mines
Unique or threatened ecosystems	None within 10 km radius from all of the applied mines
Important topographical features, including ridges, river valleys, shorelines, and riparian areas	None within 10 km radius from all of the applied mines
Mangrooves	None within 10 km radius from all of the applied mines
Physical Sensitive Receptors	None within 10 km radius from all of the applied mines
Notified Ground Water Zone by CGWA	None within 10 km radius from all of the applied mines
Critically Environmental polluted Area	None within 10 km radius from all of the applied mines
Pollution Sources	None within 10 km radius from all of the applied mines

1.2 Project Description

The proposed project of Barbaspur & Ghodhari Farshipathar/Limestone Quarry of 36.64 Ha is situated at Village- Barbaspur & Ghodhari , Tehsil- Mahasamund , District: Mahasamund , State: Chattishgarh. The life span of proposed mine block is 30years. The proposed method of mining is open cast semi mechanized mining.

Table 2.1: Salient Features of the Proposed Mining Project

SN	Name of the Applicant	Status of Operation (New Project or Existing Project)	Name of the Mineral to be mined	Type of land	Method of Mining	No. of working days
1	Archana Chandrakar	New Project	Farshi Pathar	Private	Open-cast mining, mode of working will be manual.	240
2	Jhhalaram Chandrakar	Existing Project	Farshi Pathar	Private & Government	Open-cast mining, mode of working will be manual.	240

1.2.1 Water Requirement

The total water requirement shall be 290.50 KLD for Barbaspur & Ghodhari Farshi Pathar Mine respectively for domestic, green belt and sprinkling purpose, which will be sourced from Water Tankers from nearby village. Detail of water requirement is given below:

Dust suppression – 106.50 KLD

Green Belt –92.00 KLD

Domestic – 28.50 KLD

Table 2.2 A: Water Requirement Details

1.2.2 Power Requirement

No power is required for mining purpose only for labour, admin building. State electricity board will supply the electricity. Electric power is available in the lease area.

1.2.3 Manpower Requirement

The mining project will generate direct & indirect employment. Local people will get direct employment, and some persons will also be affected indirectly and employed with allied and related industries, such as transportation, maintenance, etc. Following staff & workers are proposed to be employed: -

Table 2.3 : Manpower Details

1.3 Description of Environment

The area around the proposed mining site has been surveyed for physical features and existing environmental scenario. The field survey and baseline monitoring has been done from the period of **October 2021 to December 2021** (Winter Season).

The observations for winter season-(October 2021 –December 2021) are summarized below:

1.3.1 Air Environment

The ambient air quality is carried out at 24 locations in and around the project site and studies are carried out as per CPCB standards. It is observed that, all the values are within the prescribed limits as per National Ambient Air Quality Standards (NAAQS), 2009.

The observations for Winter season - (October 2021 – December 2021) are summarized below

Particulate Matter (PM₁₀) :

A maximum concentration of PM₁₀ is 74 µg/m³ was observed at the AAQM-1,4 and minimum value of 50 µg/m³ was observed at AAQM – 24.

Respirable Particulate Matter (PM_{2.5}) :

A maximum concentration of PM_{2.5} is recorded to be 28 µg/m³ at AAQM-2 and minimum value of 10 µg/m³ was observed at AAQM-8,9,10,12,13,15,18,21,22,24

Sulphur Dioxide (SO₂):

Maximum concentration of SO₂ is observed to be 18 µg/m³ at AAQM -6,11,16,17 and minimum value of 5 µg/m³ observed at AAQM- 8,9,10,12,13,18,21,22

Oxides of Nitrogen (NO_x):

Maximum concentration of NO_x is observed to be 15µg/m³ at AAQM – 15 & minimum value of 6 µg/m³ observed at AAQM – 2,9,21,24

Carbon Monoxide (CO):

Maximum concentrations in the region are observed to be 0.9 mg/m³ at AAQM-1,2,3,8,12,13,14,20,22 and minimum value of 0.4 mg/m³ observed at AAQM-.15

Silica

Silica in the ambient air of the 10 Km radius of the study area of the project site has been analysed from the PM10 filter paper of the Ambient Airquality monitoring stations mentioned in Table 3.3 (7601 ,Issue 3 as per NIOSH Methods). The result indicates that silica concentration in the surrounding of project site was found to be in the range of 0.1µg/m³to 0.3 µg/m³.

1. 3.2 Noise Environment

Noise levels were monitored in Twentyfour locations including project within the study area. The noise levels ranged between 43.8 to 59.1 dB (A) during day time and noise levels ranged between 37.0 to 47.4 dB (A) during night time. Over all the monitored noise levels are found to be within the stipulated standards set by CPCB.

1.3.3 Water Environment

In order to establish the baseline water quality, 12 ground water and 12 surface water samples were collected and analyzed in the study area. The quality of surface water samples was compared with surface water specification IS 2296:1982 and the surface water quality comes under Class D (Propagation of wildlife and fisheries). The ground water samples were compared with drinking water specification IS 10500:2012 standards.

1. 3.4 Soil Quality

A total of 12 samples in and around the project site are collected and analysed. It has been observed that the pH of the soil quality ranged from 7.2 to 7.7 indicating that the soil is slightly alkaline in nature.

1.3.5 Land Use/Land Cover of the Study Area

A hybrid Level-2 land use classification has been done using **Supervised Classification Method**. The bands 2,3,4,8 were found to be most appropriate. Finally 7 classes were derived and for the easier understanding and the image was classified. The classified land use pattern is given in Table 3.10 and represented in Figure no. 3.16. The False Color Composite of the area is presented in Figure no.1.2

Figure1.3: LULC Classification (10 km radius Proposed Project Area) of the project site

1.3.6 Biological Environment

Study of biological environment is one of the most important aspects for Environmental Impact Assessment. In view of the need for conservation of environmental quality and biodiversity study, biological environment is one of the most important aspects for Environmental Impact Assessment. Ecological systems show complex inter-relationships between biotic and abiotic components including dependence, competition and mutualism. Biotic components comprise of both plant and animal communities, which interact not only within and between them but also with the abiotic components viz. physical and chemical components of the environment. Generally, biological communities are the indicators of climatic and edaphic factors. The biological

environment includes mainly terrestrial ecosystem and aquatic ecosystem. The mining activities are one such external influence, which might affect the ecology of an area, if proper management measures are not taken.

1.3.7 Socio-economic Environment

An environmental factor is a socio economic concern. The emphasis is mostly on the social and economic consequences of the proposed development's construction and operation. It covers characteristics such as demographic composition, access to basic utilities such as housing, education, health and health services, occupation, water supply, sanitation, connectivity, and power, prevalent local diseases, and characteristics such as tourist sites and ancient monuments. The examination of these criteria aids in defining and assessing the potential implications of project activity on the surrounding area. Every development effort has an immediate and indirect, positive and negative impact. Every development activity has an immediate and indirect, good and bad impact on the region's socioeconomic environment.

1.4 Anticipated Environment Impacts and Environment Management Plan

Land/Soil Environment Impact Mitigation

The mitigation measure of the land environment includes:

- Before the mining activity the top soil will be scrapped and stored in the lease area and will be utilized for plantation purpose. Balance top soil if any preserved separately will be used to spread over partially reclaimed land.
- The farshi pathar excavated from the lease area will be completely sellable resulting no dump within the lease area
- At the end of conceptual period the excavated quarry will converted into water reservoir to supply water for local use like irrigation and pisciculture.
- Due to manual mining operation emission from the farshi pathar mines are very less, there will be no impact on the surrounding soil quality and cropping pattern of the area.
- The propose project falls under the seismic zone –II (Low Hazard Risk Zone). Since this project will not have physical infrastructure to be constructed, no impact of seismicity is envisaged in this project. Further, this project will not change/alter the seismic behavior of the area.
- ***Air Impact Mitigation***

The mitigation measures undertaken in the mine for control of air pollution are:

- Checking of vehicles and machinery to ensure compliance to Indian Emission Standards
Transportation vehicles and machinery to be properly and timely maintained and serviced

regularly to control the emission of air pollutants in order to maintain the emissions of NO_x and SO_x within the limits established by CPCB.

- 4 KLD water required towards dust suppression purpose for which 2 no. of water tanker with 2000 liter capacity will be hired and used for water sprinkling twice in a day in haul roads, dumping site, loading and unloading site of each lease within the cluster and this will be regularly monitored by the cluster management. Water sprinkling on transport road side, stock yard (if any) etc. will be done by tractor mounted water sprinkler.
- Regular ompaction and grading of haul roads will be done to clear the accumulaion of loose material
- All the mines workers will be provided with the dust masks.
- Trees can act as efficient biological filters. As this is a small lease, the area available for plantation is very less. However a well-planned plantation programme has been proposed for the mining area to arrest the dust pollution within the lease boundary. There is the proposal for continuous plantation along the cluster boundary and both side of the road connecting the cluster.
- Vehicles with valid PUC shall be used for transporting the minerals to avoid the exhaust emission.
- A greenbelt development plan is prepared with local species. The greenbelt on the periphery will reduce the dust levelsits
- Regular monitoring of the air quality as per the monitoring plan detailed in Chapter 6 of this EIA report, shall be adopted during the operation phase, to ensure that, the air quality is within the desired limits prescribed by CPCB.

Noise Impact Mitigation

- No noise polluting work shall be carried out in the night hours
- Provision of PPE's for the workers
- Vehicles to be serviced regularly and maintained properly to avoid any unwanted generation of noise or vibration from them
- Green belt plantation and garden trees will help in reducing the noise, traffic related pollution and heat island effects.
- Proper lubrication, muffling and modernization of equipment shall be used to reduce the noise during operation phase.

- Regular monitoring of the noise levels as per the monitoring plan detailed in Chapter 6 of this EIA report, shall be adopted during the operation phase, to ensure that, the noise levels are within the limits prescribed by CPCB.

Water Impact Mitigation

- Provision of temporary toilets for labourers
- Domestic waste water will be treated into septic tank followed by soak pit outside of the proposed cluster project with a safe distance and no wastewater will be allowed to be get discharged into the water body
- All stacking and loading areas should be provided with proper garland drains
- Check dams should be provided to prevent solids from wash off.
- Construction of garland drains around freshly excavated and dumped areas so that flow of water with loose material is prevented.
- The mine water should be passed through specially constructed catch pits to arrest any loose material being carried away with water.
- Any areas with loose debris within the leasehold should be planted.
- Garland drains should be constructed surrounding the waste dumps and should be connected to the surface water reservoir to avoid the run-off mixing directly to natural water channels before settling.
- Ground water table will not be intersected during the mining activity.

Biological Impact Mitigation

- Green belt will be developed along the core zone boundary which will act as a pollution barrier for the biological environment.
- The drilling and transportation will be carried out during the day time only minimizing the impact on the wild fauna movement.
- Fencing around the entire mine lease area is recommended in order to restrict the entry of stray animals into the mining area.

Socio-Economic Environment Impact Mitigation

- For the mining work, an average of 798 workers will be required in the project sites, which will be met from skilled and unskilled labourers from the local

Draft EIA Report for Barbaspur&Ghodhari Farshi Pathar Mine at Village-Barbaspur&Ghodhari Tehsil-Mahasamund, District –Mahasamund, State- Chattishgarh .

population as far as possible. Thus, the project can provide employment to local workers during the operation of mines.

- The area is considered as industrially backward. The population in general does not have opportunities of earning from employment. The only employment to depend on is agriculture, which is seasonal
- There is no human settlement in or around the mining block areas, hence no clearance of human settlement is required for the mining operation.
- The proposed mining project activity does not involve any resettlement and rehabilitation process as the project is freshly designed at representative site where none of the settlement is present.
- The mining activity could lead to increased nuisance level from air emissions and noise due to transportation of material and equipment as well as laborers.

1.5 Environmental Monitoring Program

Environmental monitoring shall be carried out at the locations to assess the environmental health in the post period. A post study monitoring programme is important as it provides useful information on the following aspects.

- It helps to verify the predictions on environmental impacts presented in this study.
- It helps to indicate warnings of the development of any alarming environmental situations, and thus, provides opportunities for adopting appropriate control measures in advance.

Detailed EMP plan during the operation phase is given chapter 6 of EIA report.

1.6 Risk Assessment

The hazards and its risk assessed during the operation phase of the proposed farshi pathar mining project are low, medium & high. The project proponents are proposed to implement all the mitigation measures to prevent the impact or consequences of the risk expected to be happened in both the project sites. The level of impact after implementing the mitigation measures will be low/medium in all the hazards identified.

1.7 Emergency Response and Disaster Management Plan

Impact of disaster can be significantly reduced through attempts at preparedness, mitigation, and post-event rehabilitation work. Based on hazard identification in the proposed project, an emergency plan has been prepared and the same plan will be implemented by the project implementing agency with the coordination of District Authorities to minimize the damage. The risk assessment and disaster management plan is detailed in Chapter 7 of the EIA report.

1.8 Project Benefits

Mining is back bone of infra-structure development of country. Proposed project has following benefits as given below:

- Employment for local people
- Revenue for the State Government in form of excise duties, GST, taxes, levies etc.
- Generate business opportunity for the people
- Need based funds will be used for welfare of people in villages
- EMP funds will improve environmental quality.
- The operation of the farshi pathar mining would help to improve socio-economic condition of people in villages through separate fund allocated for Need Based Activity.

1.9 Budget for Social Development

The total estimated cost of the project is 462.04 lacs . Rs 12,95,000/- lac will be allocated for Need based activity for causes of village for drinking water, sanitation, education, health.

1.10 Environment Management Plan (EMP)

The detailed Environment Management Plan has been prepared based on the mining activities and the impacts imparting on land/soil, air, noise, water by the activities. The EMP and the cost for the environment protection measures are detailed in Chapter 10 of EIA report

1.11 Conclusion

As discussed, it is safe to say that the collection of minor minerals from the proposed lease area is not likely to cause any significant impact on the ecology of the area as the mineral is and waste generated is non-toxic and does not harm the surrounding environment.

Adequate measures will be taken to control the fugitive emissions to be generating during mining operation. Socio-economic condition of the surrounding villages will improve in long run due to involvement of local population and improvement of infrastructure facilities. Green belt development in the statutory boundary, approach roads, schools are proposed with the participation of local people. This proposed plantation in the area will improve the aesthetic look along with betterment of ecology and environment of the locality.
